Ph.D. ENTRANCE EXAMINATION SYLLABUS

PART B: ECONOMICS (ECON)

Faculty Category: Humanities & Social Sciences · Academic Year 2026–2027

DEPARTMENT OVERVIEW & ELIGIBILITY CRITERIA:

Scope: Microeconomics, Macroeconomics, Econometrics, Developmental Economics, Public Finance, and Agricultural Economics.

Prescribed Eligibility: Master's degree in Economics / Applied Economics / Econometrics / Development Economics with at least 55% marks (50% for SC/ST/OBC non-creamy layer/PwD/EWS) or equivalent grade from a recognized University.

Examination Structure: Part B carries 50 Marks (Proposed) out of 75 total marks · Duration: 120 Minutes (Combined Part A & B)

APPROVED RESEARCH DOMAINS & FACILITY SPECIALIZATIONS:

Domain Code	Approved Research Area & Indicative Specialization
Domain 1	Microeconomic Theory & Behavioral Economics
Domain 2	Macroeconomic Policy, Inflation & Growth Models
Domain 3	Econometric Modeling & Quantitative Economics
Domain 4	Development Economics & Poverty Alleviation
Domain 5	Public Finance, Taxation & Fiscal Federalism
Domain 6	Agricultural Economics & Rural Development

PART B: CORE DISCIPLINE EXAMINATION SYLLABUS UNITS:

Unit / Subject Area	Detailed Curriculum & Examination Topics
Unit 1: Microeconomic Analysis	Theory of consumer choice: Cardinal, ordinal, revealed preference theory, consumer choice under risk and uncertainty. Theory of production and costs: Production functions (Cobb-Douglas, CES), returns to scale, cost curves. Market structures: Perfect competition, monopoly, monopolistic competition, oligopoly models (Cournot, Bertrand, Stackelberg, kinked demand curve). General equilibrium theory and welfare economics: Pareto optimality, social welfare functions, Arrow's impossibility theorem, market failure, externalities and public goods.
Unit 2: Macroeconomic Theory & Policy	National income accounting and determination. Classical, Keynesian, Monetarist, and New Classical macroeconomic models. Aggregate demand and aggregate supply. IS-LM framework with open economy (Mundell-Fleming model). Theories of consumption and investment (Permanent income, life-cycle, accelerator, Tobin's q). Theories of money demand and money supply. Inflation, unemployment, and Phillips curve analysis. Monetary and fiscal policy coordination.
Unit 3: Quantitative Methods & Econometrics	Probability theory, probability distributions (Binomial, Poisson, Normal). Sampling distributions, estimation, and hypothesis testing. Classical Linear Regression Model (CLRM): OLS estimation, assumptions, Gauss-Markov theorem. Violations of CLRM: Multicollinearity, heteroscedasticity, autocorrelation (nature, detection, consequences, and remedies). Dummy variables, simultaneous equation models and identification problem. Time series econometrics: Stationarity, unit roots, cointegration.
Unit 4: Development Economics & Public Finance	Theories of economic growth and development: Harrod-Domar, Solow, Lewis, Rostow, Big Push, Balanced vs Unbalanced growth models. Human development index (HDI), poverty, and inequality measures (Gini coefficient, Lorenz curve). Public Finance: Public goods, merit goods, taxation (canons, incidence, shifting, deadweight loss). Public expenditure, public debt, deficit financing, fiscal federalism, and Finance Commission recommendations.
Unit 5: International Economics & Indian Economy	Theories of international trade: Classical, Heckscher-Ohlin, Stolper-Samuelson, Rybczynski theorems. Terms of trade, gains from trade, tariffs and non-tariff barriers, WTO regulations. Balance of Payments (BOP): Equilibrium, disequilibrium, and adjustment mechanisms. Foreign exchange market and exchange rate determination. Indian Economy: Economic reforms since 1991, agricultural transformation, industrial growth, service sector dynamics, inflation management, banking and
